TRANSPORT and STORAGE CONDITIONS OF ALUMINIUM STRIPS AND SHEETS BY CUSTOMER

Strips/sheets should be transported by covered, dry and clean means of transport preserving current regulation, protecting it from mechanical damage, humidity and harmful environmental factors.

Strips/sheets should be stored in covered, dry and clean rooms protecting them from humidity and action of active chemicals. Protection of coil edges against mechanical damage should be taken into special attention. Busting fire damage can cause difficulties in uncoiling process.

The storage temperature room should be stable. Changes of the temperature in stock cause that air moisture is condensed on the strip surface, in consequence of capillary action, between coils, penetrates inside and inducing corrosion.

Disregard of above mentioned transport and storage conditions absolves supplier from responsibilities for material quality.
